HomeAboutDashboardLogin

Farm Overview Dashboard

Manage your crop lifecycles and farm telemetry. Connected to local database server.

Dark Mode

08

Active Farms

Total active farm sites registered under telemetry supervision.

06

Current Crops

Active crop schedules currently logged in memory store.

03

Weather Alerts

Automated weather risks based on crop sensitivities.

Crop Cycle Management

Track planting, growth, harvest schedules, and acreage.

Add New Crop Cycle

Search crops by name, variety, category, status...

Status Filter

All Statuses

Growing

5.5 Acres

Rice

VARIETY: Basmati 370

Category: Grain

Planted: 2026-06-01

Est. Harvest: 2026-10-15

Cycle Progress 20%

Planned

8 Acres

Wheat

VARIETY: Kalyan Sona

Category: Grain

Est. Harvest: 2027-04-10

Cycle Progress 0%

Planted

2.5 Acres

Tomato

VARIETY: Roma

Category: Vegetable

Planted: 2026-06-20

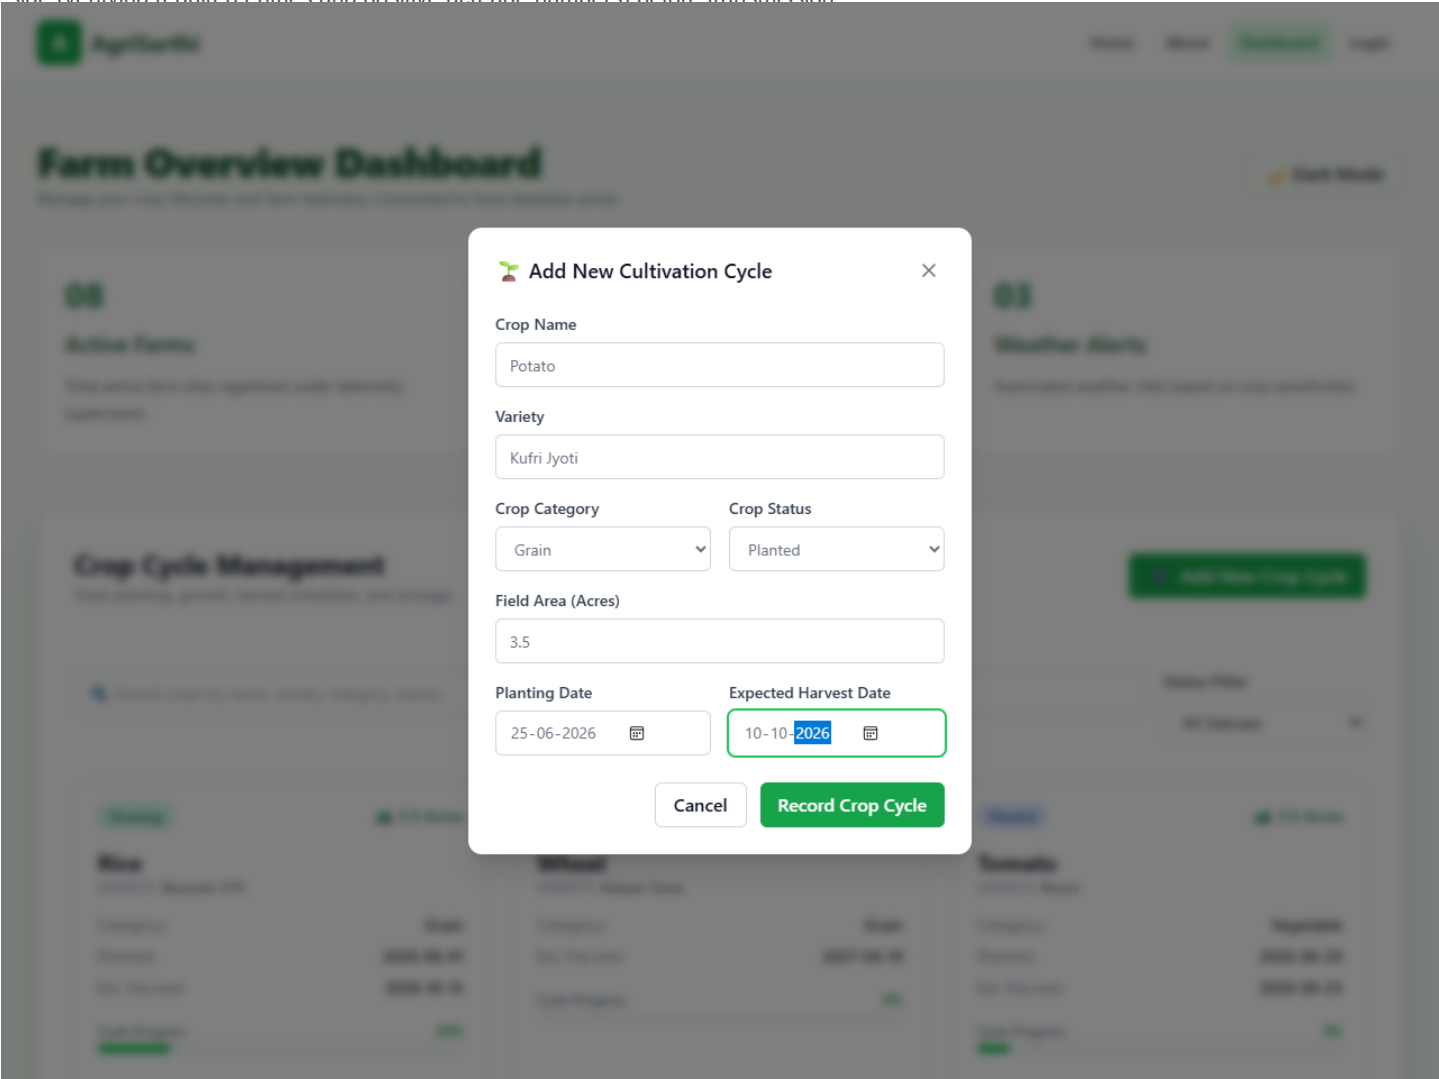

Est. Harvest: 2026-09-25

Cycle Progress 9%

AgriSarathi Full-Stack Telemetry Integration (Week 4)

Screenshot 2: Crop Cycle Form Dialog with input validations

Description: Demonstrating the crop creation workspace in the custom Modal overlay. The form fields (Crop Name, Variety, Category, status, field acreage, and timelines) are filled for a new crop record ('Potato', variety 'Kufri Jyoti'). Validation constraints are enforced on the client side (verifying required entries and positive acreage numbers) before transmission

AgriSarathi Full-Stack Telemetry Integration (Week 4)

Screenshot 3: Updated dashboard list and successful API Telemetry Console

Description: Post-submission state showing the crops list successfully refreshed and the 'Current Crops' count incremented to '07' after adding the Potato crop. At the bottom, the console highlights the REST API operations logged in real-time by the frontend interceptors: the POST request to create the cycle (HTTP 201 Created) followed by the automatically triggered GET requests to stats and crops endpoints
